

PRIMER

PHASE
1

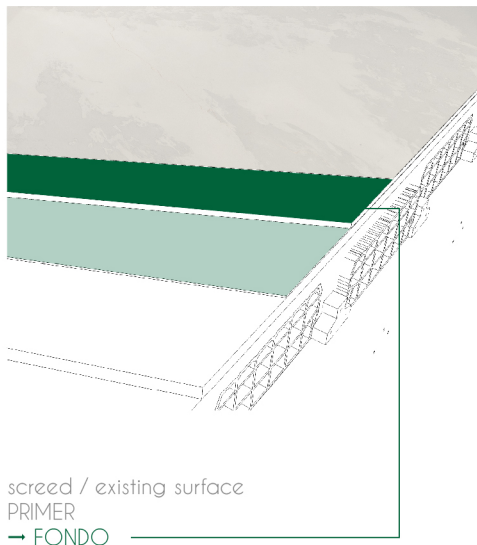

Mono-component primer with high adhesion performance on all surfaces, ready to use or to dilute based on the surface absorption. PRIMER has to be applied on the whole surface, with brush or roller. It is used to fix the fiber-glass mesh.

FONDO

PHASE
2

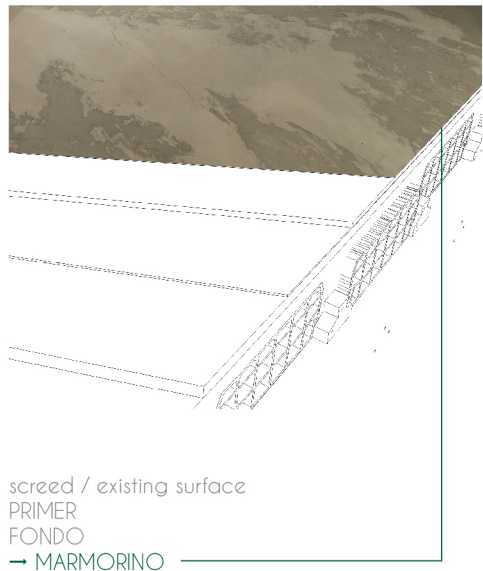

Filling base in paste, to apply on the whole surface to level the flooring before finishing. FONDO has to be applied with spatula and must be sand-polished before following application.

MARMORINO

PHASE
3

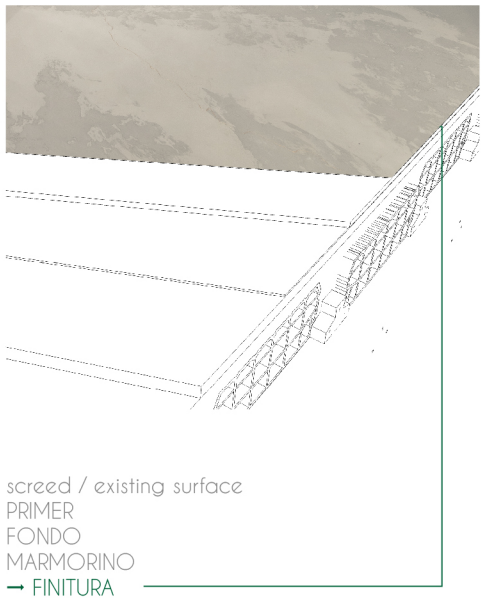

Finishing paste, available in fine and medium grain size, to realize decorative finishing, very flexible and with good waterproofing function and high mechanical performance.
MARMORINO has to be applied in two or more layers, with steel or plastic smooth spatula. It can be coloured with tintometric system, with the possibility of infinite chromatic effects.

FINITURA

PHASE
4

Bi-component, transparent polyurethane finishing, it is used on medium-to-low mechanical wear as surface protection and to improve the anti-scratch characteristics.
FINITURA has to be applied with roller or spray on the whole surface.
