

**ADHESIVES AND
REINFORCING MORTARS**
FOR FACADES AND THERMAL INSULATION

ADHESIVES AND THICK COATINGS

GRIGOTHERM solutions are complete and designed to offer the best synergy between the products involved. The choice of system to be used depends on many factors: intervention on new or existing building; thickness available for new insulation; urban/building context; need for high fire resistance or high sound insulation; specific design choices.

To offer the maximum number of solutions while maintaining the high quality of all products, Grigolin has certified all its ETICS at the prestigious German institute DIBt, obtaining several ETA since 2005. ETICS have been subjected to all required tests, including fire resistance testing. Results are reported in the certifications of currently available systems.

The quality of the adhesives and skim plasters is carefully checked to make high performance and reliable products. The products comply with EN UNI 998-1 and are added with inert elements to give different performance characteristics. Each product is formulated and tested to be able to develop and achieve the best adhesion and workability performance, to act in synergy with all products of the GRIGOTHERM System.

ETA 07/0145

ETA 13/0001

AC 20 UNILIGHT

ADHESIVE/SKIM PLASTER
LIGHTENED WITH EPS

Light-colored lightweight mineral adhesive/skim plaster with low thermal conductivity, suitable for all types of insulation panels for insulation systems, with excellent workability and ease of application, lightened with EPS beads. It allows to make layers of thickness equal to 5-10 mm, in a simple way, still obtaining adequate mechanical resistance for the protection of thermal insulation systems.

AC 07 AC 08 ISOLFLEX

FLEXIBLE
ADHESIVE/SKIM PLASTER

Adhesive/skim plaster, grey or white colour, specific for EPS-F and MW insulating panels for fine-grained coating systems, very flexible, weather-resistant with excellent workability, guaranteeing long lasting performance.

AC 16 UNIRAS

FIBER-REINFORCED UNIVERSAL ADHESIVE/SKIM PLASTER

White, fiber-reinforced adhesive and skim plaster, suitable for all types of insulating panels for coat systems, can also be used to level and finish new or existing plasters, highly vapor permeable, very flexible, extremely resistant to weathering featuring excellent workability.
