The lime ovens in 1963 in Ponte della Priula (TV) - Italy

The current production plant in Ponte della Priula (TV) - Italy

# Our expertise comes from 50 years of experience.

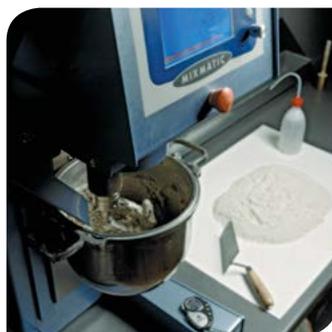

## We know matter.

Fornaci Calce Grigolin S.p.A. is now one of the most important Italian and international company in the field of materials and technologies for the construction industry. It has over fifty years of experience, gained in the pipeline and research and development laboratories, and looks to the future with a view to evolving.

The Grigolin Group operates in the building and construction industry with a wide range of products and an efficient network of people, systems, equipment and vehicles optimally distributed in the territory.

The Group's main companies are Superbeton, Fornaci Calce Grigolin, TesiSystem, Brussi Construction and Ferrobeton, they operate in various production sectors such as the mining sector, the production of aggregates, calcium carbonate, ready mix concrete, lime, mortar and premixed plasters, colors and External insulation systems for thermal insulation, asphalt, industrial prefabricated, machined steel for reinforced concrete, road works, paving, construction and infrastructure works.

The Group is a reality among the most important at national level in Italy, thanks to large systems of synergies between subsidiaries, diversification and verticalization of productive sectors, technology development, applied research and continuous attention to environmental values.

## PRODUCTION DEVELOPMENT

In Ponte della Priula, along the shore of the Piave river, in the '50s Giobatta Grigolin starts his entrepreneurial adventure in an area of established tradition for the production of lime.

Survived to the Russian campaign, he invests his savings in an old american truck and he starts to transport sawdust and river stones: fuel and raw material for the lime furnaces based along the river bed.

Since then, his moral strenght, his intuitions and his generosity have been an example for the whole family, who proudly inherited the wonderful reality.

The first Grigolin lime furnace starts producing in 1963 and after only three years the production is triplicated. The following business development transforms the small family company into an important reality of the italian industry.

Fornaci Calce Grigolin development phases:

End of 80s: skimmers and mortars production start;

1995 - Ponte della Priula (TV) Factory

Mortars and skimmers

Self-levelling screeds

2000 - technological products research, development and production;

2001 - new factory in Medesano (PR)

Skim plasters and adhesives

2002 - new factory in Bosco Marengo (AL)

Special mortars for walls renovation

2003 - Acquisition of factory in Ettlingen - Germany

Germany know-how study and acquisition

Insulation systems and paints

2004 - New factories in Borgoricco (PD) and Colleferro (Roma)

2005 - New paints factory in Medesano (PR)

2006 - New factory in Zandobbio (BG)

Technical mortars

2008 - New factory in Nuvolera (BS)

2012 - The third kiln in Ponte della Priula (TV) starts producing

The distinctive features of the production of Fornaci Calce Grigolin are:

modern plants with high productivity and a continuous cycle;

the production cycle of the lime that, thanks to the use, as wood sawdust fuel, is considered zero impact as regards the Kyoto Protocol;

High availability of its deposits of calcareous raw material of high quality and homogeneity;

High storage capacity of the finished product;

Transport and efficient service with its own means;

internal chemical laboratory and certification in accordance with current UNI EN 459.

# RESEARCH

Fornaci Calce Grigolin is constantly developing thanks to the constant search for new product solutions and new building systems.

The company can boast a range of products among the most comprehensive and extensive that there are on the construction market.

This helps to ensure maximum compatibility between the products as they are the result of research aimed at optimizing the result.

In central laboratories in Italy and Germany all new products are developed, also the laboratories of all the establishments concerned to verify the production to ensure a high level of product quality.

Paint factory in Medesano, research and innovation are the elements that characterize the work of every day, in fact the production is directly related to the laboratory where they are formulated colors.

## SELECTION OF OUR REFERENCES

In central Sliema the newest state-of-the-heart shopping centre in Malta

The Point Shopping Mall opened its doors early 2010 and it is the newest, most modern and largest development of its kind, and is now one of the largest shopping malls in Malta.

The Point in Malta has over 50 shops ranging from the latest fashion wear and fashion shows, to juice bars, a supermarket and a car park with space for over 1000 cars spread over three floors on 17,000m<sup>2</sup>.

Thanks to the beautiful design of The Point, its prime location, its spacious areas and products offered, The Point has become the first shopping mall in Malta that can be compared to shopping malls abroad.

Portopiccolo (Sistiana - Italy) can be identified as an intervention of architectural redevelopment, urban planning and the environment of the whole area. With the construction of over 400 housing units, hotels, restaurants, bars, shops, spas and swimming pools, you can guess what the construction of this luxury village in the Bay of Sistiana has contributed to the recovery of the whole area.

The operation, carried out in five years, maintains full compliance with the physical and morphological characteristics of the soil, giving new life to the surrounding landscape in a modern context and nonetheless valuable. Bathed by the crystalline waters of the Bay, nestled in the cliffs, the village is part of the nature of these places and stands out thanks to the performance of the architectural design, choice of materials and finish colors, as well as the attention to renewable energy and energy saving.
